AIRBORNE CAMERA SOLUTION FOR MORE SAFETY AND NEW STANDARDS IN AVIATION

Fraunhofer IIS and SEKAI Europe are working jointly on the development of a modular camera system that can be used for in-flight testing of airplanes and helicopters.

Key facts:

- Different small and lightweight camera heads that can be chosen depending on operational needs
- Cheap and simple signal transmission to the central processing module
- Easy integration into air vehicles and suitable for operations in adverse weather
- Low power consumption

Potential application areas:

- Flight Testing
- Aviation
- Machine and equipment testing in industrial environments

**Feel free to contact us in order to get more information
about the FTI system!**
